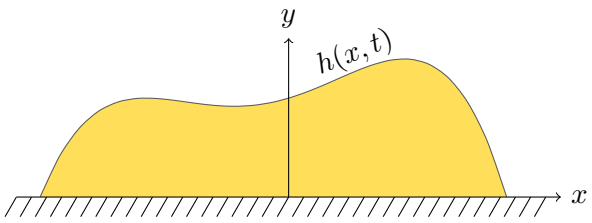

Figure 1: Beer spilled on a table.

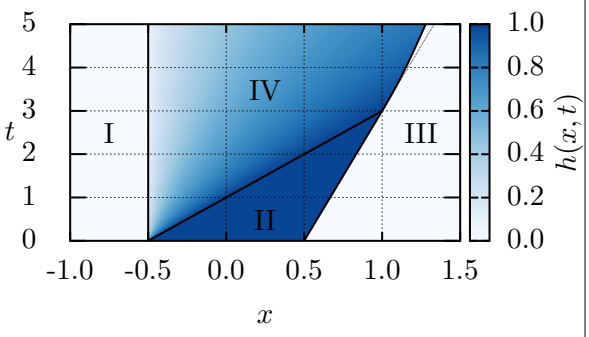

Figure 2: $\alpha = \pi/6$

$$\rho\left(\frac{\partial \mathbf{u}}{\partial t} + (\mathbf{u}\cdot\nabla)\mathbf{u}\right) = -\nabla p + \mu\nabla^2\mathbf{u} + \rho\mathbf{g}$$

1 2d

$$\frac{\partial h}{\partial t} = \frac{1}{3}\nabla\cdot\left(h^3\nabla h\right) \tag{1}$$

$$\int_{\mathbb{R}} h\,\mathrm{d}x \tag{2}$$

$h(x,t) = t^\alpha f(\eta)$ where $\eta = xt^{-\beta}$
$\alpha = -1/5$ $\beta = 1/5$

$$\frac{-3}{5}\left(\eta f' + f\right) = \left(f^3 f\right)'$$

$$f = \left(\frac{9}{10}\right)^{1/3}\left(\eta_*^2 - \eta^2\right)^{1/3}$$

$$\eta_* = \left(\frac{6075\Gamma^6\left(\frac{2}{3}\right)\Gamma^6\left(\frac{11}{6}\right)}{16\pi^9}\right)^{1/10}$$
$$\approx 0.747412$$

Pellentesque cursus luctus mauris.

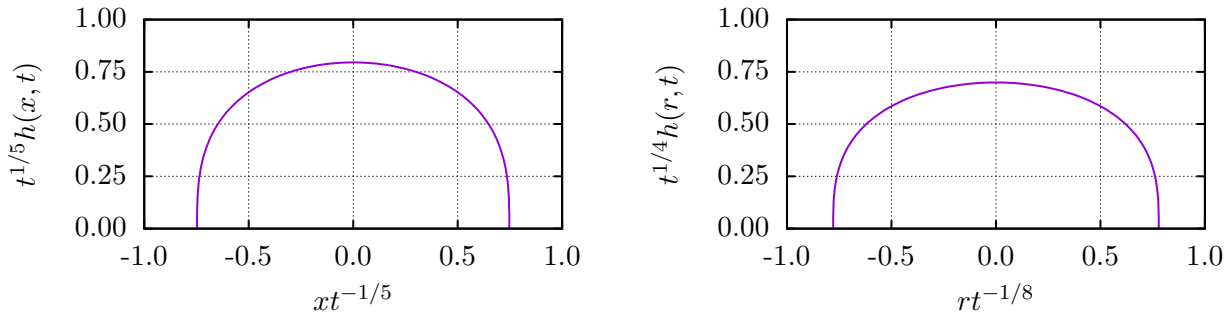
2 Polar

solve (1) and (2) in polar
$\alpha = -1/4$ $\beta = 1/8$

$$\frac{-3}{8}\left(2\eta f + \eta^2 f'\right) = \left(\eta f^3 f'\right)'$$



(a) (b)

Figure 3

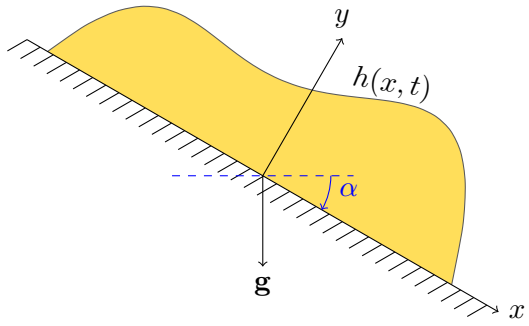


Figure 4: Beer spilled on a crooked table.

$$f = \left(\frac{9}{16}\right)^{1/3} \left(\eta_*^2 - \eta^2\right)^{1/3}$$

$$\begin{aligned} \eta_* &= \left(\frac{1024}{243\pi^3}\right)^{1/8} \\ &\approx 0.779212 \end{aligned}$$
